The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets.

The manufacturer has classified this product as 4 out of 7, which is a medium risk class. This rates the potential losses from future performance at a medium level.

Be aware of currency risk. If you are a non-UK investor, you will receive payments in a different currency, so the final returns you will get depend on the exchange rate between the two currencies. This risk is not considered in the indicator shown above. This product does not include any protection from future market performance so you could lose some or all of your investment.

Investment performance information

The Investment Manager of AGT observed over the last 5 years that this fund has a volatility of 12.59% and a return of 10.76% per year.

Therefore, as an investor, you should be aware that your expected return will likely range between -9.94% and 31.46% with a 95% confidence.

The above estimates are based on share price total return with dividends reinvested. However, what you get will vary depending on how the Fund's underlying investments perform, how the overall market performs and how long you keep the investment and your loss could be larger than -9.94% in extreme market circumstances.

What happens if AVI Global Trust plc is unable to repay?

The Company is a closed-end investment trust company listed on the London Stock Exchange and therefore investors will be able to close their investments on each working day. As a shareholder of AVI Global Trust plc you would not be able to make a claim to the Financial Services Compensation Scheme (or equivalent overseas authorities in the case of non-UK shareholders) in the event that the company is unable to pay out.
