Portfolio Objective

The Future Leaders portfolios are managed with a dual mandate to achieve long-term capital growth at low cost, whilst investing responsibly. This mandate is achieved by building a portfolio with higher environmental, social and governance (ESG) characteristics than traditional benchmarks, whilst avoiding the most harmful businesses in the market. This Cautious Plus portfolio is diversified across a mix of equities, fixed income and cash.

Portfolio Performance¹

Cumulative Performance (%)	3M	6M	1Y	3Y	5Y	Since launch
EQ Future Leaders Cautious Plus	3.44	5.99	13.59	24.80	21.33	36.95
IA Mixed 20-60%	0.86	5.41	13.67	29.78	22.41	34.89

Discrete Performance (%)	Jun 25 May 26	Jun 24 May 25	Jun 23 May 24	Jun 22 May 23	Jun 21 May 22
EQ Future Leaders Cautious Plus	13.59	3.32	6.34	-0.99	-1.81

Top 10 underlying companies

Description

Weighting

NVIDIA	9 Leader in GPU design and chip systems, primarily for data centre servers	3.0%
Alphabet	Global tech company behind 'Google', with advertising as main revenue	2.7%
Apple	Producer and supplier of consumer electronics, software, and online services	2.1%
Microsoft	9 Cloud infrastructure, developer of soft and hardware technology solutions	1.6%
Amazon	Global multifaceted e-commerce and technology company	1.5%
Taiwan Semiconductor Manufacturing	9 Leader in semiconductors manufacturing, key enabler to climate transition	1.4%
Broadcom	9 Semiconductor design for GPUs, data science and cloud computing	1.0%
SK Hynix	9 Manufacturer of memory semiconductors for computing and data storage	0.7%
Samsung Electronics	Manufacturer of electronic components and devices	0.5%
Netflix	Global streaming platform offering on-demand digital content	0.5%

The top 10 underlying equity holdings represent the top 10 equity exposures held in an aggregated list of each funds' underlying holdings in the portfolio. Multiple issues of a single company are aggregated in this list. Icons represent the overall company alignment to the UN Sustainable Development Goals. To produce this data, we use a snapshot of the funds held at the last rebalance.

UN Sustainable Development Goals: A framework for impact

The 17 UN Sustainable Development Goals (“Global Goals”) describe the world’s greatest social and environmental challenges. These have been agreed as the global call to action by over 190 countries around the world. We use the Global Goals as our framework for impact, positively selecting investments that contribute to solutions to these diverse unmet needs, while excluding those investments that harm progress on the goals.

While many Global Goals can be tackled by a company’s core products and services, some goals are directly targeted through companies’ operations. We still touch on these goals, despite the lens of impact not being represented by the UN SDG mapping data shown. This is assured through selecting responsibly run companies driving positive change through their management. Our approach aims to positively impact non-investable goals through engagement on the operations of the company.

Portfolio alignment with the UN Sustainable Development Goals

1	NO POVERTY	
2	ZERO HUNGER	0.1%
3	GOOD HEALTH & WELL-BEING	6.0%
4	QUALITY EDUCATION	0.2%
5	GENDER EQUALITY	
6	CLEAN WATER & SANITATION	0.6%
7	AFFORDABLE & CLEAN ENERGY	6.2%
8	DECENT WORK & ECONOMIC GROWTH	3.1%
9	INDUSTRY, INNOVATION & INFRASTRUCTURE	16.9%

SUSTAINABLE DEVELOPMENT GOALS

10	REDUCED INEQUALITIES	11.9%
11	SUSTAINABLE CITIES & COMMUNITIES	5.0%
12	RESPONSIBLE CONSUMPTION & PRODUCTION	1.3%
13	CLIMATE ACTION*	
14	LIFE BELOW WATER	
15	LIFE ON LAND	
16	PEACE, JUSTICE & STRONG INSTITUTIONS	
17	PARTNERSHIP FOR THE GOALS	
	NEUTRAL	46.1%
	NEGATIVE	2.6%

Global Goals with no figure indicate the portfolio has 0% exposure: this is because either the Global Goal presents few investable opportunities, or companies within the portfolio provide exposure to multiple goals and the most relevant goal has been selected. *The Climate Action goal overlaps with more specific goals, so we have instead mapped our exposure to these.

To produce this data, we use a snapshot of the funds held at the last rebalance. Underlying fund holdings are updated on a quarterly basis. Percentages may not add up to 100% as they are rounded to the nearest decimal. All holdings are analysed against EQ’s proprietary taxonomy of SDG aligned products/services and the list of harmful product/services.

Portfolio impact comparison to Global Equities & UK Equities

To calculate the alignment for 'Global Equities' and 'UK Equities', we use data from ETFs tracking the performance of MSCI ACWI and FTSE 100, respectively.

Environmental, Social and Governance Risk

Environmental, Social and Governance (ESG) ratings are **third-party** assessments of how well a company manages **long-term**, financially material ESG risks and opportunities, relative to peers in its industry. These ratings focus on how environmental and social issues, together with corporate governance practices, could affect its financial performance.

Each company in the portfolio is scored on a range of **topic-specific** metrics such as waste management, water use, labour rights, workplace safety, business ethics and board independence. The metrics considered, and how heavily they are weighted, vary by sector. For example, heavy industrials are more exposed to carbon emissions and local pollution, data centre providers to electricity and water usage, and pharmaceutical companies to product safety and pricing practices. By investing in companies that manage these risks effectively, the portfolio aims to enhance its overall sustainability profile and reduce exposure to financially material ESG risks.

This chart shows where the **portfolio's** holdings sit on the ESG rating bands, so you can see the spread of stronger and weaker ESG risk management across the companies we invest in. A score of 100 represents a company that is considered a leader in managing ESG risks and opportunities within its industry.

Data source: Clarity AI, Analysis: EQ Investors, data as at the last rebalance.

To produce this data, we use a snapshot of the equity funds held at the last rebalance. Underlying fund holdings are updated on a quarterly basis.

Portfolio business activity exposures

In order to invest responsibly, the EQ Future Leaders portfolios avoid investing in the most harmful business activities. The portfolios have a stringent exclusion policy covering the most controversial business activities, with specific thresholds covering all funds and asset classes. Below shows the current portfolio's exposure to these controversial activities, benchmarked against both Global and UK equities.

All holdings are analysed against EQ's proprietary taxonomy of SDG aligned products/services and the list of harmful product/services.

To calculate the alignment for 'Global Equities' and 'UK Equities', we use data from ETFs tracking the performance of MSCI ACWI and FTSE 100, respectively.

What's the carbon footprint of your portfolio?

All investments carry a carbon footprint, by investing in businesses that emit greenhouse gases through their activities.

% difference in carbon emissions vs UK Equities

-68.8%

£100,000 GBP investment in the EQ Future Leaders Cautious Plus portfolio has 66 tonnes less associated emissions, compared to investing the same amount in a UK Equities index.

To illustrate the scale of this difference, we have converted it into commonly known equivalents:

- 14 average passenger cars driven within one year;
- 16 UK household's energy use within one year; or
- 7.4 thousand gallons of gasoline burned.

Data source: Clarity AI, Analysis: EQ Investors, data as at the last rebalance.

Please note that switching your investments does not directly save emissions in the real world and does not offset your personal carbon footprint.

We use an industry standard methodology, which lets us associate the tonnes of CO₂ equivalent (CO₂e) emitted per 1m GBP invested, and scale it to any amount of shareholding. We use the "Financed carbon emissions method", using Enterprise Value including Cash (EVIC) as recommended in the PCAF carbon accounting standard.³

To calculate the alignment for 'Global Equities' and 'UK Equities', we use data from ETFs tracking the performance of MSCI ACWI and FTSE 100, respectively.

Science Based Targets (SBTs)

Launched in 2015, the Science Based Targets initiative (SBTi) has been the gold standard for Net Zero emissions targets and is backed by four prestigious global bodies.⁴

The initiative intends to increase corporate ambition on climate action by mobilising companies to set greenhouse gas emission reduction targets consistent with the level of decarbonisation required by science to limit warming to less than 1.5°C / 2°C compared to preindustrial temperatures.

The chart alongside shows the EQ Future Leaders Cautious Plus company alignment to the SBTs.

Data source: Clarity AI, Analysis: EQ Investors, data as at the last rebalance.

⁴ Carbon Disclosure Project (CDP), UN Global Compact (UNGC), World Resource Institute (WRI) and World Wide Fund for Nature (WWF).

To produce this data, we use a snapshot of the equity funds held at the last rebalance. Underlying fund holdings are updated on a quarterly basis. Percentages may not add up to 100% as they are rounded to the nearest decimal.

This factsheet constitutes neither an offer, solicitation, nor investment advice to buy or sell any security or any other investment or product. It should not be reproduced or distributed in any format without EQ's prior written consent. The information in this factsheet is for illustrative purposes only and while believed to be correct, no representation or warranty, expressed or implied, is given as to its accuracy or completeness. Percentages may not add up to 100% as they are rounded to the nearest percent. EQ Investors Limited ("EQ"), its partners and employees accept no liability for the consequences of you or your advisers acting upon the information contained herein. The Portfolio aims to rebalance quarterly during Feb, May, Aug and Nov, but is not limited to these dates.

¹ The value of investments and income derived from them may fluctuate and investors may not get back the amount originally invested. The performance of portfolios linked to this model may differ from the model itself, due to the variation in timing of the initial and subsequent investments. This portfolio is not suitable for all investors: investments may only be undertaken based on a recommendation from a financial adviser.

² The MIFID II Ex-Ante charges are forward looking estimates based on the previous fiscal year's information and may vary year to year. 'Ongoing Costs' include adviser, administration, custodian, legal and other fees that typically do not vary year to year. 'Transaction Costs' include the costs of buying or selling assets for the fund. 'Incidental Costs' include performance fees. For newly launched funds that do not have historical data available, the Ex-Ante figure is estimated. The fund charges shown are based on the share classes available on the Pershing platform; charges may vary across platforms based on share class availability.

³ We only focus on the equity portion of the portfolio to enable comparability with a standard market index, and include direct and indirect carbon emissions from the businesses (Scope 1,2 and 3 as defined by the greenhouse gas protocol). Scope 1 & 2 covers direct emissions and those from purchased energy. We also chose to include Scope 3 emissions, which are all the indirect upstream and downstream emissions of a business, e.g. providers/suppliers or from the use of their products and services. Please note that naturally, the associated Scope 3 emissions may include some double counting when investing in businesses sharing the same supply chains. The underlying Scope 1,2 and 3 carbon emissions data is sourced by Clarity AI and reflect most recent portfolio holdings and disclosed carbon data.
